

Did You Know...

WINTER DRIVING TIPS: TIRES

As the outside temperature drops, so does tire inflation pressure.

Before driving, make sure each tire is filled to the vehicle manufacturer's recommended inflation pressure (this information is located in the owner's manual and on a label located on the driver's side door frame). Do not inflate your tires to the pressure listed on the tire itself. That number is the maximum pressure the tire can hold, not the recommended pressure for your vehicle.

Inspect your tires –

- Check them while they're 'cold' – meaning that they have not been driven on for at least 3 hours.
- Check for any damage or conditions that may need attention
- Check the tread and sidewalls for any cuts, punctures, bulges, scrapes, cracks, or bumps. The tread should be at least 2/32 of an inch or greater
- Check on your spare tire.
